

NJIT Trip for Engineering Students

The Holmdel Architectural and Engineering students with the FTC Robotics students visited the New Jersey Institute of Technology to explore the facilities and interact with professionals at NJIT. Students learned more about what engineering and design opportunities can be expected at the college level. This trip of Satz Middle School and Holmdel High School students was planned by Mr. O'Keefe and Mr. Pietrocola to help encourage Holmdel students of all levels to interact and foster lasting relationships among their peers. Students had the opportunity to discuss architectural disciplines, maker space facilities, and Biomedical engineering research and learn new ways to build on their multidisciplinary STEM skills for their future careers.
